Scrum - User story #1051

Inherit product backlogs and sprints to subprojects

2015-07-24 13:10 - Jess Nielsen

Status:	Rejected		
Priority:	Normal		
Category:	Product backlog		
Target version:			
Blocked:	No	**Alone:**	

Description

It have a project hierarchy that looks in the following way:

Group Project
+ Project A
+ Project B

The group project does not allow any trackers while project a and b do.

I can create product backlogs and sprints for each product,
but i want to be able to create a product backlog and sprints for the
group product that is inherited to its parent projects.

The current installed version is 0.10.

+1!!!

This would be the best feature to be added. We currently work with a main project on the top and several subprojects, but they share the sprint.

This would solve this problem!

+1 as well from us.

Having multiple projects in the same sprint really would be helpful
