Scrum - Defect #1279

Input date of the 'scrum new form' are not rendered correctly

2016-12-16 19:57 - Angelinsky7 Angelinsky7

Status:	New		
Priority:	Low		
Category:	Sprint board		
Target version:			
Source:	Development	**Blocked:**	No
Detected on version:	Scrum v0.17.0	**Alone:**	No

Description

The input date fields of the scrum new 'child' form are not rendered correctly.
The reason is that the datepicker javascript file is never called on the board page.
The calendar_for tag should do that, but because it's never called on the main page the lib does not exist and when the calendar_for is called from the ajax request it cannot use the *datepickerFallback* api and add a calendar icon. (does an error in the console)

A naive workaround would be to add a call to it by adding

```
<%= calendar_for('issue_start_date') %>
```

at the end of the **common/_scrum_footer.html.erb** file

History

#1 - 2017-09-21 09:40 - Luis Amigo

I can confirm the workaround works on:

```
Environment:
  Redmine version            3.3.1.stable
  Ruby version               2.3.3-p222 (2016-11-21) [x86_64-linux-gnu]
  Rails version              4.2.9
  Environment                production
  Database adapter           Mysql2
```
