

Scrum - Defect #1522

Problem dragging & dropping tasks in the Sprint board

2017-12-12 12:29 - Germano Costa

Status:	Resolved		
Priority:	Normal		
Category:	Sprint board		
Target version:	Scrum v0.18.2		
Source:	Customer	Blocked:	No
Detected on version:	Scrum v0.18.0	Alone:	No
<p>Description</p> <p>I had Redmine 3.0 and Scrum plugin 0.12.0. I migrated Redmine to 3.4.3 and Scrum plugin to 0.18.0. In my old Redmine I Drag & Dropped post-its normally, but after migration, when I try to move the post-its, de application show me the Error: "Fail to change the task status." and the post-it come back to old status (visually in Sprint board). Despite this, if I refresh the Sprint board (Pressing F5 in browser) the post-it appears in the new status correctallly, in other words, although the error message is shown, the status change occurs.</p> <p>I identified that in the update of versions (of Redmine and Scrum plugin), the Sprint field of subtasks lost its data reference. Despite that, the subtasks are shown in the Sprint board inside the correct Sprint, but when I edit one subtask its Sprint field is empty, causing the problem described. If I select the Sprint value in the combo and save, the Drag N' Drop of this subtask works correctly.</p> <p>I figured out that the "sprint_id" field of all subtasks were migrated as [null], while all parent issues came with the "sprint_id" filed fill correctly. Maybe there are any problem with migration script?</p>

Revision 614095db - 2017-12-17 13:15 - Emilio González Montaña

[#1522] Fix dragging task issues without Sprint

History

#1 - 2017-12-12 13:13 - Germano Costa

Actually, I realized that in Redmine 3.0 and Scrum 0.12 all "sprint_id" fields of subtasks are empty, despite that I can move the post-its correctly. After migration, the drag n' drop of post-its only works if I fill the field.

Why in Scrum 0.18 I need to fill "sprint_id", when in 0.12 did not? I think that the behaviour must be the same.

I had Redmine 3.0 and Scrum plugin 0.12.0. I migrated Redmine to 3.4.3 and Scrum plugin to 0.18.0. In my old Redmine I Drag & Dropped post-its normally, but after migration, when I try to move the post-its, the application shows me the Error: "Fail to change the task status." and the post-it comes back to old status (visually in Sprint board). Despite this, if I refresh the Sprint board (Pressing F5 in browser) the post-it appears in the new status correctly, in other words, although the error message is shown, the status change occurs.

I identified that in the update of versions (of Redmine and Scrum plugin), the Sprint field of subtasks lost its data reference. Despite that, the subtasks are shown in the Sprint board inside the correct Sprint, but when I edit one subtask its Sprint field is empty, causing the problem described. If I select the Sprint value in the combo and save, the Drag N' Drop of this subtask works correctly.

I figured out that the "sprint_id" field of all subtasks were migrated as [null], while all parent issues came with the "sprint_id" field filled correctly. Maybe there are any problem with migration script?

This is a problem, since I do not need to change the Sprint value in all subtasks when I change in the parent issue. The parent issue value rules.

#4 - 2017-12-12 20:19 - Emilio González Montaña

- Source changed from Development to Customer

- Priority changed from Immediate to Normal

- Subject changed from Problem with Migration from Scrum 0.12 to 0.18 to Problem dragging & dropping tasks in the Sprint board

That piece of code could contain an error due the fact task issues could have a parent PBI issue but they could be not assigned to an Sprint.

So I will review that piece of code.

But on the other hand I have no idea how your issues were unassigned from any Sprint to nothing... do these issues have any kind of history where you can check how this could happen?

#5 - 2017-12-13 11:57 - Germano Costa

- File Default Sprint in subtask.jpg added

Thanks for your answer!

Well, in Redmine 3.0 with Scrum 0.12, when I create a subtask, the default value of Sprint field is blank as shown at [Default Sprint in subtask.jpg](#). Despite the subtask has empty Sprint value, its parent PBI always have a valid Sprint value and this is sufficient to show both PBI and its subtask in Sprint board, I suppose. The fact is, all PBI (which contains subtasks) have Sprint value, but for all subtask, Sprint value is blank, despite this, in Redmine 3.0 with Scrum 0.12, drag n' drop works well.

#6 - 2017-12-17 13:16 - Emilio González Montaña

- Target version set to Scrum v0.18.2

- Status changed from New to Resolved

Fixed on `master` branch.

#7 - 2017-12-19 13:57 - Germano Costa

Thank you very much, Emilio!

Do you can tell me when TAG 0.18.2 will be available?

Germano, so idea right now, no so much was accumulated on this version...

If you support this open source project, you gain GIT access, take a look to:

No pressure :)
