Description			
<p>I am starting to use your redmine plugin, and try to understand how it works. I happens I am not able to create task either in the SPRINT or BACKLOG view. I get the following message Fail to create a product backlog item (undefined method `<' for nil:NilClass).</p> <p>I am also not able to move tasks or stories in the SPRINT view.</p> <p>I am using redmine 3.4.7, could this be a compatibility issue ?</p>
