<b>Description</b>			
<p>Hi, To install the localizable plugin for Redmine 5, people need to install the 0.4.0 release from the files page, then download some updated files from <a href="https://redmine.ociotec.com/projects/localizable/repository">https://redmine.ociotec.com/projects/localizable/repository</a> (which by the way, does not appear when logged into the site) and add these files to their install. Could you please release an updated version of the whole plugin ?</p>
