Category:	Permissions	Estimated time:	0.00 hour
Target version:		Redmine version:	Redmine 1.3.0
Source:	Customer		
Detected on version:	Advanced roadmap 0.5.1		
Description <p>I have recently installed the plugin in my redmine server, very useful and beatiful... but since I am the administrator I haven't realized there was a bug for my non-administrative users.</p> <p>As soon as one of them updated an issue (adding a comment or changing the status) I have recieved an email with the upgrade, and it shows to me when I browse there, but it does not show for them or for any other non-administrator user which should have access to those issues (even if they are the assignee).</p> <p>I had to give it up (for now) cause they needed to follow the upgrades up, but I am willing to try and help testing possible fixes to it. I am pretty sure it has something to do with the show.xml.builder or the issues_controller_patch.rb cause the have calls for the journals information, but I am not sure what could be the root cause.</p>
